

# The **thesistu** class\*

Maximilian Hoheiser  
`maximilian.hoheiser@student.tuwien.ac.at`

September 22, 2016

## **Abstract**

This class provides a  $\text{\LaTeX} 2_{\varepsilon}$  template for theses at any Faculty at any University given by the author, only a Logo of the Faculty and University is needed. With a little effort it can be adapted to fit any Faculty at any University. In the current version, bachelor and master theses as well as dissertations are supported in both English and German.

---

\*This document corresponds to **thesistu** v0.1, dated 2016/09/01.

# 1 Introduction

This class provides a L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> template for all theses at the Faculty of Physics at the TU Wien. It can be adapted to fit any Faculty at any Universit. Further information on the document class and accompanying support can be found at <https://madmaxt800.github.io/thesistu/>. Further guidelines may apply to both the format and structure of certain theses. Thesis authors are advised to consult Section 3 for a documentation of all relevant commands. Information for class developers is provided in Section 4.

# 2 Known Issues

This class is incompatible with the `minitoc` package as of version 60, due to the incompatibility of the underlying `memoir` class. Use the `titletoc` package as a replacement.

# 3 Usage for Document Authors

This section contains relevant information for authors of theses that are based on the `thesistu` document class.

## 3.1 Data

To allow the generation of the title pages, signature fields, statements, etc., several pieces of information have to be set by the author using the commands in the subsequent sections. We discern several categories of data: *(i)* textual data, which is given by a simple text string, *(ii)* persons, which are defined by their names, optional titles, and their gender, as well as, *(iii)* dates and *(iv)* list data, which allow the selection of one argument from a list of permissible arguments. Several commands have polylingual capabilities and support different languages (see Section 3.1.5). A superscript P, i.e., `\commandP`, indicates such a command.

### 3.1.1 Textual Data

```
\setaddress
\setregnumber
\settitle
\setsubtitle
\setcurriculum
\setuniversity
\setfirstreviewerdata
\setsecondreviewerdata
\setfaculty
\setinstitut
```

All commands in this section are called with one mandatory argument, e.g., as `\command{<text>}`, where `<text>` defines the content of the commands. For polylingual commands, given by `\commandP`, one `<text>` argument has to be supplied for each language (see Section 3.1.5). The following textual data can be set:

Command	Role	Type	Optional
<code>\setaddress</code>	Address of the author	All	No
<code>\setregnumber</code>	Registration number of the author	All	No
<code>\settitle<sup>P</sup></code>	Title of the thesis	All	No
<code>\setsubtitle<sup>P</sup></code>	Subtitle of the thesis	All	Yes
<code>\setcurriculum<sup>P</sup></code>	Name of the curriculum	B, M	No
<code>\setuniversity</code>	Name of the university	B, M	No
<code>\setfaculty</code>	Name of the faculty	B, M	No
<code>\setinstitut</code>	Name of the institut	B, M	No
Types: Bachelor (B), Master (M), Doctoral (D), PhD School (P), All (All)			
Command	Role	Type	Optional
<code>\setfirstreviewerdata</code>	Affiliation and country of first reviewer	P	No
<code>\setsecondreviewerdata</code>	Affiliation and country of second reviewer	P	No
Types: Bachelor (B), Master (M), Doctoral (D), PhD School (P), All (All)			

### 3.1.2 Persons

`\setauthor`    All commands in this section are called with four mandatory arguments, e.g., as  
`\setadvisor`    `\command{\langle pretitle \rangle}{\langle name \rangle}{\langle posttitle \rangle}{\langle gender \rangle}`, where  $\langle name \rangle$  defines both  
`\setsecondadvisor` the first name(s) and family name(s) of the person. A title that is placed before  
`\setfirstassistant` the name is assigned with  $\langle pretitle \rangle$ , while a trailing title is given with  $\langle posttitle \rangle$ .  
`\setsecondassistant` Both  $\langle pretitle \rangle$  and  $\langle posttitle \rangle$  can be left empty, to indicate an absence of such  
`\setthirdassistant` a title; the insertion of appropriate glue between titles and names is handled by  
`\setfirstreviewer` the `thesistu` class. The declaration of the persons gender via  $\langle gender \rangle$  allows  
`\setsecondreviewer` the use of gender-specific terms in languages that support them, e.g., German.  
The possible options for  $\langle gender \rangle$  are `male` and `female` (see Section 3.1.4). The  
following persons can be set:

Command	Role	Type	Optional
<code>\setauthor</code>	Author of the thesis	All	No
<code>\setadvisor</code>	Main advisor of the thesis	All	No
<code>\setsecondadvisor</code>	Second advisor of the thesis	P	Yes
<code>\setfirstassistant</code>	First advising assistant	B, M	Yes
<code>\setsecondassistant</code>	Second advising assistant	B, M	Yes
<code>\setthirdassistant</code>	Third advising assistant	B, M	Yes
<code>\setfirstreviewer</code>	First thesis reviewer	D, P	No
<code>\setsecondreviewer</code>	Second thesis reviewer	D, P	No
Types: Bachelor (B), Master (M), Doctoral (D), PhD School (P), All (All)			

### 3.1.3 Dates

**\setdate** All commands in this section are called with three mandatory arguments, e.g., as **\command{<day>}{<month>}{<year>}**. The syntax is identical to the last three arguments of the **\newdate** command of the **datetime** package, from which these commands derive. The following dates can be set:

Command	Role	Type	Optional
<b>\setdate</b>	Signing date	All	No
Types: Bachelor (B), Master (M), Doctoral (D), PhD School (P), All (All)			

### 3.1.4 List Data

All commands in this section are called with at least one mandatory argument called *<list>*, e.g., as **\command...{<list>}**..., where *<list>* is given one element from a set of possible arguments.

**\setauthor** When setting a person, the person's gender is specified with a list argument (see  
**\setadvisor** Section 3.1.2):  
 ...

Command	Options	Description
<b>\command{&lt;.&gt;}{&lt;.&gt;}{&lt;.&gt;}{&lt;list&gt;}</b>	<b>male</b>	Specifies a male person.
	<b>female</b>	Specifies a female person.

**\setthesis** The thesis type is selected from one of the fundamental types:

Command	Options	Description
<b>\setthesis{&lt;list&gt;}</b>	<b>bachelor</b>	Specifies a bachelor's thesis.
	<b>master</b>	Specifies a master's thesis.
	<b>doctor</b>	Specifies a dissertation.
	<b>phd-school</b>	Specifies a dissertation at the Vienna PhD school of Informatics.

**\setmasterdegree** With a master's curriculum, different degrees can be achieved and the appropriate type has to be chosen based on the curriculum that the author is enrolled in:

	Command	Options	Description
	<code>\setmasterdegree{<i>list</i>}</code>	<code>dipl.</code>	Specifies the degree 'Diplom-Ingenieur(in)'.
		<code>master</code>	Specifies the degree 'Master of Science'.
		<code>rer.nat.</code>	Specifies the degree 'Magist(er/ra) der Naturwissenschaften'.
		<code>rer.soc.oec.</code>	Specifies the degree 'Magist(er/ra) der Sozial- und Wirtschaftswissenschaften'.
<code>\setdoctordegree</code>	With a doctorate study, different degrees can be achieved and the appropriate type has to be chosen based on the program that the author is enroled in:		
	Command	Options	Description
	<code>\setdoctordegree{<i>list</i>}</code>	<code>techn.</code>	Specifies the degree 'Doktor(in) der Technischen Wissenschaften'.
		<code>rer.nat.</code>	Specifies the degree 'Doktor(in) der Naturwissenschaften'.
		<code>rer.soc.oec.</code>	Specifies the degree 'Doktor(in) der Sozial- und Wirtschaftswissenschaften'.

### 3.1.5 Polylingual Data

<code>\setcurriculum</code>	Used as <code>\setcurriculum{<i>english</i>}{<i>german</i>}</code> , it sets the name of the curriculum that the student is enroled in. The name can be given in English, with <i>english</i> , and in German, with <i>german</i> . Note that the curriculum name does not need to be supplied for all thesis types, since, e.g., doctoral studies do not have a curriculum per se. If a title page of one of the languages is not used, the corresponding argument can be left empty.
<code>\settitle</code>	Used as <code>\settitle{<i>english</i>}{<i>german</i>}</code> , it sets the title of the thesis. The title can be given both in an English version, with <i>english</i> , and in a German version, with <i>german</i> . For title pages in a given language, the corresponding title will be used. Unused languages can be supplied as empty brackets and it is possible to use the English or German title for both language versions.
<code>\setsubtitle</code>	Used as <code>\setsubtitle{<i>english</i>}{<i>german</i>}</code> , it sets the subtitle of the thesis. The same specifications as for <code>\settitle</code> apply.
<code>\setuniversity</code>	Use as <code>\setuniversity{<i>english</i>}{<i>german</i>}</code> , it sets the university name both

in english and in german, if both the english and the german titlepage are used, both names must be supplied.

**\setfaculty** Use as **\setfaculty{<englisch>}{<german>}**, it sets the faculty name both in english and in german, if both the english and the german titlepage are used, both names must be supplied.

**\setinstitut** Use as **\setinstitut{<englisch>}{<german>}**, it specifies a name for your institut, like the **\setinstitut** macro depending on which titlepage is used, the german and, or the english name must be supplied.

**\addtitlepage** The titlepage can be generated in the following languages (see Section 3.2):

Command	Options	Description
<b>\addtitlepage{&lt;list&gt;}</b>	<b>english</b>	Generates an English title page.
	<b>naustrian</b>	Generates a German title page.

Note that a non-English title page is not yet available for a dissertation at the Vienna PhD School.

## 3.2 Layout

Most of the data that is supplied with the commands of the previous sections is used to generate the front matter of the thesis. It consists of obligatory items such as the title page(s) and the statement of originality as well as optional items such as the acknowledgements or the abstract in different languages. In the remainder of this section, the available items of the front matter are given.

**\setlogo** Used as **\setlogo{<UNins>}**, where **<UN>** are the first two letters of your university and **<ins>** are the first three letters of your institut. The Logo-File must be a vector graphic with the **.eps** format. The file must be placed in the main graphics folder and must have the name: **UNins\_logo.eps**. To create your own, use the given ones as reference. And make sure, that you submit your new ones to

**\setheader** Used as **\setheader{<UNins>}**, where **<UN>** are the first two letters of your university and **<ins>** are the first three letters of your institut. The Logo-File must be a vector graphic with the **.eps** format. The file must be placed in the main graphics folder and must have the name: **UNins\_header.eps**. To create your own, use the given ones as reference. And make sure, that you submit your new ones to GitHub.

The goal is to have as many logos and headers as possible, so that the author only has to specify one and not create his/her own. A list is given and regularly updated which lists the available ones:

Name	University	Institut
TUinf	TU Wien	Informatik
TUifp	TU Wien	Institut für Festkörperphysik

The following section describes the information that is needed for the footnote on the titlepage, besides the university name.

<code>\setunizipcode</code>	Used as <code>\setunizipcode{&lt;ZipCode&gt;}</code> , where <code>&lt;ZipCode&gt;</code> is the ZipCode of the University in the form of eg: <code>{&lt;A-1040&gt;}</code> , where <code>&lt;A&gt;</code> is the first letter of the country, and <code>&lt;1040&gt;</code> is the actual zipcode.
<code>\setunistreet</code>	Used as <code>\setunistreet{&lt;Steetname Steetnumber&gt;}</code> , where <code>&lt;Steetname&gt;</code> is the name of the street, and <code>&lt;Steetnumber&gt;</code> is the Steetnumber of the university.
<code>\unicity</code>	Used as <code>\setunicity{&lt;City&gt;}</code> , where <code>&lt;City&gt;</code> is the City of your universities address.
<code>\setunitelnr</code>	Used as <code>\setunitelnrTelephone Number</code> , where <code>&lt;Telephone Number&gt;</code> is the main telephone number of your university, this is not necessary but the layout will look better with the telephone number given.
<code>\setuniwebsite</code>	Used as <code>\setuniwebsite{&lt;URL&gt;}</code> , where <code>&lt;URL&gt;</code> is the website of your university (without <code>http://</code> ).
<code>\addtitlepage</code>	Used as <code>\addtitlepage{&lt;lang&gt;}</code> , where <code>&lt;lang&gt;</code> is the name of a language as given in the <code>babel</code> package (see Section 3.1.4). The necessary pieces of information have to be set beforehand (as described in Section 3.1). This command is usually used directly after <code>\begin{document}\frontmatter</code> .
<code>\addstatementpage</code>	Used as <code>\addstatementpage</code> , it generates a page with the statement of originality.
<code>acknowledgements</code> <code>acknowledgements*</code>	Used as <code>\begin{acknowledgements}&lt;text&gt;\end{acknowledgements}</code> , this environment generates a chapter with the English acknowledgements. Use the starred version, i.e., <code>acknowledgements*</code> , to remove the table of content entry of this environment.
<code>danksagung</code> <code>danksagung*</code>	Used as <code>\begin{danksagung}&lt;text&gt;\end{danksagung}</code> , this environment generates a chapter with the German acknowledgements. Use the starred version, i.e., <code>danksagung*</code> , to remove the table of content entry of this environment.
<code>abstract</code> <code>abstract*</code>	Used as <code>\begin{abstract}&lt;text&gt;\end{abstract}</code> , this environment generates a chapter with the English abstract. Use the starred version, i.e., <code>abstract*</code> , to remove the table of content entry of this environment.
<code>kurzfassung</code> <code>kurzfassung*</code>	Used as <code>\begin{kurzfassung}&lt;text&gt;\end{kurzfassung}</code> , this environment generates a chapter with the German abstract. Use the starred version, i.e., <code>kurzfassung*</code> , to remove the table of content entry of this environment.

All the above sections are displayed without chapter header, chapter or section numbering and are listed and are numbered in the table of contents with roman numbers.

## 4 Usage for Class Writers

To accomodate shifting requirements, the `thesistu` class provides various convenience functions that allow the modification and extension of its functionality.

### 4.1 Data

To compose several parts of the thesis layout, input from the thesis author is required. For the `thesistu` class, this is realized by the commands provided in Section 3.1. Additional data can be defined with the the commands in the remainder of this section.

`\CreateData` Used as `\CreateData{<name>}`, it generates a command `\set{<name>}`. Used as `\set{<name>}{<string>}`, the newly created command assigns the value `<string>` to the internal variable `\thesistu@data@<name>`. The variable is initialized with an error value to alert the user of the fact that `<string>` was not supplied via the `\set{<name>}` command. Furthermore, a command `\thesistu@data@<name>@def` is created, to increase source code readability when verifying the existence of a specific data item. See Section 5.2.6 for examples.

`\CreatePerson` Used as `\CreatePerson{<name>}`, it generates a command `\set{<name>}`. Used as `\set{<name>}{<prettitle>}{<personname>}{<posttitle>}{<gender>}`, the newly created command assigns the supplied values to the corresponding internal variables `\thesistu@person@<name>@...` as given in the table below.

Argument	Internal Variable
	<code>\thesistu@person@&lt;name&gt;@def</code>
<code>&lt;prettitle&gt;</code>	<code>\thesistu@person@&lt;name&gt;@prettitle</code>
<code>&lt;personname&gt;</code>	<code>\thesistu@person@&lt;name&gt;@name</code>
<code>&lt;posttitle&gt;</code>	<code>\thesistu@person@&lt;name&gt;@posttitle</code>
<code>&lt;gender&gt;</code>	<code>\thesistu@person@&lt;name&gt;@gender</code>

The command `\thesistu@person@<name>@def` is created to increase source code readability when verifying the existence of a specific person. Furthermore, the command `\thesistu@person@<name>@fullname` returns the person's name together with existing titles and correct whitespace in between. The person's gender is either `\thesistu@person@male` or `\thesistu@person@female`, depending on the input. See Section 5.2.6 for examples.

`\AddLanguage` Used as `\AddLanguage{<lang>}`, it enables the language `<lang>` to be used by polylingual expressions. `<lang>` has to be chosen from the languages of the `babel` package that is used by this class. Currently, `thesistu` uses two languages, i.e., `english` for English expressions and `naustrian` for German expressions.

`\CreatePolylingual` Used as `\CreatePolylingual[<expressions>]{<name>}`, it generates a command

`\thesistupolylingual@⟨name⟩` that selects the appropriate expression based on the current language at the time of use. The argument `⟨expressions⟩` is a list of elements of the form `⟨expri⟩`, where each element defines the expression for a valid language, e.g., `⟨langi⟩=⟨texti⟩`. `⟨langi⟩` has to be chosen from the languages that were defined via `\AddLanguage`. As a convention, text that needs to start with an uppercase letter is assigned to a name that starts with an uppercase letter. The same holds for uppercase words, e.g.,

```
\CreatePolylingual[english=advisor,naustrian=Betreuer]{advisor}
\CreatePolylingual[english=Advisor,naustrian=Betreuer]{Advisor}
\CreatePolylingual[english=ADVISOR,naustrian=BETREUER]{ADVISOR}.
```

See Section 5.2.6 for examples.

## 4.2 Layout

Several key elements in the layout of the frontmatter are encapsulated to allow a convenient extension of this functionality.

<code>\SignatureFields</code>	Used as <code>\SignatureFields[⟨mode⟩]{⟨center⟩}{⟨right⟩}</code> , it creates a place and date description and/or one or two signature fields. <code>⟨mode⟩</code> can be set to <code>y</code> , which adds an entry with date and place to the left, to <code>h</code> , which adds the corresponding whitespace, or to <code>n</code> , which adds nothing. If text is supplied to <code>⟨center⟩</code> , it is added below a rule, right to the possible date and place entry. If text is supplied to <code>⟨right⟩</code> , it is added below a rule, right to the possible signature field created by <code>⟨center⟩</code> . This command ensures a uniform width and positioning of the signature fields on both the title pages and the statement of originality.
<code>\SignatureBlock</code>	Used as <code>\SignatureBlock</code> , it generates the signature fields for both author and advisor.
<code>\ReviewerBlock</code>	Used as <code>\ReviewerBlock</code> , it generates the signature fields for both reviewers.
<code>\AdvisorBlock</code>	Used as <code>\AdvisorBlock</code> , it generates the name fields for both the advisor and the potential assistants.
<code>\AddTitlePage</code>	Used as <code>\AddTitlePage</code> , it generates a title page in the current language. This command contains the placement of the header graphics, the footer, the appropriate blocks, etc.
<code>\AddStatementPage</code>	Used as <code>\AddStatementPage</code> , it generates a chapter with the statement of originality together with the author's signature field.
<code>SFFont</code>	Alters the sans serif font inside the environment. Called with one mandatory argument as <code>\begin{SFFont}{⟨family⟩}</code> , which determines the sans serif font family that should be used, e.g., <code>phv</code> for Helvetica.

## 5 Implementation

### 5.1 Initialization

#### 5.1.1 Class Options

Pass the options to the underlying memoir class.

```
1 \DeclareOption*{%  
2   \PassOptionsToClass{\CurrentOption}{memoir}%  
3 }%  
4 \ProcessOptions\relax
```

#### 5.1.2 Loaded Class and Packages

The `thesistu` class is based on the `memoir` class.

```
5 \LoadClass[a4paper,11pt]{memoir}%  
6 \chapterstyle{veelo}%
```

The following packages are required for the functionality and style of the document class.

```
7 \RequirePackage[scaled]{helvet}%  
8 \RequirePackage{lmodern}%  
9 \RequirePackage{courier}%  
10 \RequirePackage[T1]{fontenc}%  
11 \RequirePackage[english,naustrian]{babel}%  
12 \RequirePackage[nodayofweek]{datetime}%  
13 \RequirePackage{geometry}%  
14 \RequirePackage{calc}%  
15 \RequirePackage{etoolbox}%  
16 \RequirePackage{graphicx}%  
17 \graphicspath{{graphics/}}%
```

To use subfolders for each section in the `graphics` directory each subfolder has to be defined in the main `thesis.tex` file as a search path for latex eg: `\graphicspath{{../graphics/chapter01}{../graphics/chapter02/}}` where the `..` is used, so that each chapter can be placed in a subfolder relative to the main `thesis.tex` file and still find the correct path for the graphics.

#### 5.1.3 Low-Level Functionality

This section provides low-level functionality for macro definitions and macro expansions.

`\@namexdef` Globally defines a control sequence with an expanded argument.

```
18 \newcommand{\@namexdef}[1]{\expandafter\xdef\csname#1\endcsname}%
```

`\ifstrequal` A variant of `\ifstrequal` that fully expands the first two arguments.

```
19 \newcommand{\ifstrequal}[4]{%
20   \begingroup
21     \edef\thesistu@tempa{{#1}}%
22     \edef\thesistu@tempb{{#2}}%
23     \expandafter\expandafter\expandafter\ifstrequal
24       \expandafter\thesistu@tempa\thesistu@tempb{#3}{#4}%
25   \endgroup
26 }%
```

#### 5.1.4 Fonts

`\thesistu@HUGE` Initializes the font sizes.

```
\thesistu@huge
\thesistu@LARGE
\thesistu@Large
\thesistu@large
\thesistu@normalsize
27 \newcommand{\thesistu@HUGE}{\fontsize{30}{34}\selectfont}%
28 \newcommand{\thesistu@huge}{\fontsize{20}{23}\selectfont}%
29 \newcommand{\thesistu@LARGE}{\fontsize{17}{22}\selectfont}%
30 \newcommand{\thesistu@Large}{\fontsize{14}{18}\selectfont}%
31 \newcommand{\thesistu@large}{\fontsize{12}{14.5}\selectfont}%
32 \newcommand{\thesistu@normalsize}{\fontsize{11}{13.6}\selectfont}%
```

`SFFont` Selects the given font family as sans serif font.

```
33 \newenvironment{SFFont}[1]{%
```

Stores the current sans serif font in `\thesistu@f@family@tmp` and changes to the given sans serif font.

```
34   \begingroup
35     \sffamily
36     \global\let\thesistu@f@family@tmp=\f@family
37   \endgroup
38   \renewcommand{\sfdefault}{#1}%
```

In case the outer scope is already sans serif, the new font has to be activated.

```
39   \ifdefstrequal{\f@family}{\thesistu@f@family@tmp}{\sffamily}{}%
40 }{%
```

The scope of the font change is the environment itself. Thus, no cleanup code is required in case the outer scope was already sans serif.

```
41   \renewcommand{\sfdefault}{\thesistu@f@family@tmp}%
42 }%
```

## 5.2 Data

### 5.2.1 Dates

`\setdate` Creates the internal storage for the signing date.

```
43 \newcommand{\setdate}[3]{%  
44   \newdate{thesistu@date@signing}{#1}{#2}{#3}%  
45 }%
```

### 5.2.2 Textual Data

`\thesistu@def@data` Creates the internal storage for simple data entries.

```
46 \newcommand{\thesistu@def@data}[2]{%  
47   \@namedef{thesistu@data@#1@def}{}%  
48   \@namedef{thesistu@data@#1}{#2}%  
49 }%
```

`\thesistu@def@data@invalid` Initializes the internal storage with error messages.

```
50 \newcommand{\thesistu@def@data@invalid}[2]{%  
51   \@namedef{thesistu@data@#1@error}{%  
52     \ClassError{thesistu}{No #2 issued}{Set #1 with #2.}%  
53   }%  
54   \@namedef{thesistu@data@#1}{\@nameuse{thesistu@data@#1@error}}%  
55 }%
```

`\CreateData` Issues the construction of a setter function for a data entry given by `\setdata`.

```
56 \newcommand{\CreateData}[1]{%  
57   \@namedef{set#1}##1{%  
58     \thesistu@def@data{#1}{##1}%  
59   }%  
60   \thesistu@def@data@invalid{#1}{\string\set#1}%  
61 }%
```

### 5.2.3 Persons

`\thesistu@person@male` Two genders are differentiated for each person: male and female.  
`\thesistu@person@female`

```
62 \newcommand{\thesistu@person@male}{male}%  
63 \newcommand{\thesistu@person@female}{female}%
```

`\ifmale` Convenience macros to determine the gender of a person.  
`\iffemale`

```
64 \newcommand{\ifmale}[2]{%
```

```

65 \ifcsstring{thesistu@person@#1@gender}{\thesistu@person@male}{#2}{}%
66 }%
67 \newcommand{\iffemale}[2]{%
68 \ifcsstring{thesistu@person@#1@gender}{\thesistu@person@female}{#2}{}%
69 }%

```

\thesistu@def@person Creates the internal storage for a person's name, titles and gender.

```

70 \newcommand{\thesistu@def@person}[5]{%
71 \@namedef{thesistu@person@#1@def}{}%
72 \@namedef{thesistu@person@#1@prettitle}{#2}%
73 \@namedef{thesistu@person@#1@name}{#3}%
74 \@namedef{thesistu@person@#1@posttitle}{#4}%
75 \ifdefstring{\thesistu@person@male}{#5}{%
76 \@namedef{thesistu@person@#1@gender}{\thesistu@person@male}%
77 }{%

127 }%
```

## 5.2.4 Polylingual Text

This class supports bi- and polylingual text via a key-value mechanism. See the `\CreatePolylingual` command further down for the actual definition of polylingual expressions.

`\AddLanguage` Constructs the temporary variables and the permanent storage for polylingual text in the given language.

```

128 \newcommand{\AddLanguage}[1]{%
```

First, the key for the current language, given by its name in the `babel` package, is created. Keys of the `keyval` package are internally stored as `KV@family@keyname`, where we use `thesistu` as family name and the argument as key name. The value that is given to this key as part of a function argument is assigned to a temporary storage.

```

129   \@namedef{KV@thesistu@#1}##1{%
130     \@namedef{thesistu@current@#1}{##1}%
131   }%
```

The key value is initialized as empty.

```
132 \@nameuse{KV@thesistu@#1}{}%
```

The transfer from temporary to permanent storage is achieved by adding code to the already existing transfer routine. This causes each new language to issue the transfer for the previously defined language.

```
133 \ifundef{\thesistu@allocate@polylingual}{%
```

Define the transfer function, if it has not been defined so far.

```
134 \newcommand{\thesistu@allocate@polylingual}[1]{\@empty}%
135 }{}%
```

Store the current transfer function via `\let` to allow recursion.

```
136 \@namelet{\thesistu@allocate@polylingual@#1}%
137 \thesistu@allocate@polylingual
```

Define the transfer function to permanent storage.

```
138 \renewcommand{\thesistu@allocate@polylingual}[1]{%
```

Call the transfer routine of the previously defined language.

```
139 \@nameuse{\thesistu@allocate@polylingual@#1}{##1}%
```

To define the permanent storage, `\@namexdef` is used the definition's scope has to be global.

```
140 \@namexdef{\thesistu@##1@#1}{%
141 \ifcempty{\thesistu@current@#1}{%
```

In draft mode we mark unassigned languages, i.e., polylingual expression that were not defined for a language that is in use when the polylingual expression is called.

```
142 \ifdraftdoc{%
143 [Draft: No '#1' text for polylingual '##1'.]%
144 }\else{%
145 \relax
146 }\fi
147 }{%
```

The use of `\@namexdef` expands the content of the temporary storage before assigning it to the permanent one.

```
148 \@nameuse{\thesistu@current@#1}%
149 }%
150 }%
151 }%
```

At time of usage, the language, which is given as an argument, is checked against the currently active language.

```
152 \ifundef{\thesistu@selectlanguage@polylingual}{%
```

Define the language selection function, if it has not been defined so far.

```
153 \newcommand{\thesistu@selectlanguage@polylingual}[1]{\@empty}%
154 }{}%
```

Store the current selection function via `\let` to allow recursion.

```
155 \@namelet{\thesistu@selectlanguage@polylingual@#1}%
156 \thesistu@selectlanguage@polylingual
```

Define the selection function.

```
157 \renewcommand{\thesistu@selectlanguage@polylingual}[1]{%
```

Call the selection routine of the previously defined language.

```
158 \@nameuse{\thesistu@selectlanguage@polylingual@#1}{##1}%
```

The currently active language is given by `\language`. If it matches the language, which was supplied as the argument, the content of the current permanent storage is returned.

```
159 \ifdefstring{\language}{#1}{\@nameuse{\thesistu@##1@#1}}{}%
160 }%
161 }%
```

`\CreatePolylingual` Creates the actual polylingual expressions.

```
162 \newcommand{\CreatePolylingual}[2]{}{%
163 \begingroup
```

The key-value pairs of the optional argument define the text that is returned for the respective languages. We use `thesistu` as the family name for the keys.

```
164 \setkeys{thesistu}{#1}%
```

Each key was already assigned a temporary storage, whose content has to be transferred to permanent storage.

```
165 \thesistu@allocate@polylingual{#2}%
166 \endgroup
```

The mandatory argument `{⟨arg⟩}` is used to define the macro that returns the appropriate text for the currently active language.

```
167 \@namedef{\thesistu@polylingual@#2}{%
168 \thesistu@selectlanguage@polylingual{#2}}%
169 }%
```

### 5.2.5 Thesis Types

<code>\thesistu@thesis@basetype@undergraduate</code>	Two thesis categories are differentiated: <code>undergraduate</code> and <code>graduate</code> .
<code>\thesistu@thesis@basetype@graduate</code>	<pre> 170 \newcommand{\thesistu@thesis@basetype@undergraduate}{% 171   \thesistu@undergraduate}% 172 \newcommand{\thesistu@thesis@basetype@graduate}{% 173   \thesistu@graduate}% </pre>
<code>\ifundergraduate</code>	Convenience macros to determine the category of the selected thesis type.
<code>\ifgraduate</code>	<pre> 174 \newcommand{\ifundergraduate}[1]{% 175   \ifstrequal{\thesistu@thesis@basetype}{% 176     \thesistu@thesis@basetype@undergraduate 177   }{#1}{}% 178 }% 179 \newcommand{\ifgraduate}[1]{% 180   \ifstrequal{\thesistu@thesis@basetype}{% 181     \thesistu@thesis@basetype@graduate 182   }{#1}{}% 183 }% </pre>
<code>\thesistu@thesis@doctortype@doctor</code>	Two doctor thesis categories are differentiated: <code>doctor</code> and <code>phd</code> , where the latter
<code>\thesistu@thesis@doctortype@phd</code>	is for dissertation in the context of the Vienna PhD School of Informatics.
	<pre> 184 \newcommand{\thesistu@thesis@doctortype@doctor}{% 185   \thesistu@doctor}% 186 \newcommand{\thesistu@thesis@doctortype@phd}{% 187   \thesistu@phd}% </pre>

## 5.3 Layout

### 5.3.1 Setup

`\thesistu@squarebullet` Set internal convenience macros.

```
487 \newcommand{\newsetlength}[2]{%
488   \newlength{#1}%
489   \setlength{#1}{#2}%
490 }%
491 \newcommand{\thesistu@squarebullet}{\rule[0.47ex]{0.4ex}{0.4ex}}%
```

`\thesistu@tmp@parindent` Temporary storage for page layout lengths.

```
\thesistu@tmp@baselineskip
\thesistu@tmp@parskip
492 \newlength{\thesistu@tmp@parindent}%
493 \newlength{\thesistu@tmp@baselineskip}%
494 \newlength{\thesistu@tmp@parskip}%
```

`\thesistu@savelayout` Saves and restores relevant page layout lengths.

```
\thesistu@restorelayout
495 \newcommand{\thesistu@savelayout}{%
496   \setlength{\thesistu@tmp@parindent}{\parindent}%
497   \setlength{\thesistu@tmp@baselineskip}{\baselineskip}%
498   \setlength{\thesistu@tmp@parskip}{\parskip}%
499 }%
500 \newcommand{\thesistu@restorelayout}{%
501   \setlength{\parindent}{\thesistu@tmp@parindent}%
502   \setlength{\baselineskip}{\thesistu@tmp@baselineskip}%
503   \setlength{\parskip}{\thesistu@tmp@parskip}%
504 }%
```

### 5.3.2 Title Page

Initialize the header graphics. The vertical placement of the header graphics on the title pages are given by `\thesistu@header@placement`, while the composition of

the graphical elements are determined by the subsequent lengths, which constitute direct measurements of the graphics. If the header graphics are changed, these values have to be adapted.

```

505 \newsetlength{\thesistu@header@placement}{-41.49731pt}%
506 \newsetlength{\thesistu@bar@width}{511bp}%
507 \newsetlength{\thesistu@bar@height}{47bp}%

## 6 Change History

v0.9	subtitle existence before usage.	
General: Pre-release version . . . . .	<b>Issue #1</b> . . . . .	31
v1.0	Updated to support PhD School	
General: Initial release version . . . . .	mentioning and fixed the	
v1.1	associated vertical overflow.	
General: Added references to the	<b>Issue #4</b> . . . . .	31
GitLab environment . . . . .	<b>\AdvisorBlock</b> : Updated to	
v1.3	support second advisor. <b>Issue</b>	
<b>\AddStatementPage</b> : Updated to	<b>#4</b> . . . . .	28
support multiple languages.	<b>\ReviewerBlock</b> : Updated to	
<b>Issue #4</b> . . . . .	support external reviewers.	
<b>\AddTitlePage</b> : Added check for	<b>Issue #4</b> . . . . .	30

\SignatureBlock: Updated to support multiple dissertation types. <a href="#">Issue #4</a> . . . . .	31	TextualData: Updated to support external reviewer data. <a href="#">Issue #4</a> . . . . .	22
\addstatementpage: Updated to support english version. <a href="#">Issue #4</a> . . . . .	34	v1.4	
\ifdoctor: Added to support multiple dissertation types. <a href="#">Issue #4</a> . . . . .	18	\mainmatter: Added ‘Ruled’ pagestyle. . . . .	36
\ifphd: Added to support multiple dissertation types. <a href="#">Issue #4</a> . . . . .	18	\thesistu@def@person: Added comma to separate posttitle. . . . .	14
\setthesis: Altered to support multiple dissertation types. <a href="#">Issue #4</a> . . . . .	19	General: Added comma to separate posttitle and changed mainmatter pagestyle to ‘Ruled’. . . . .	1
\thesistu@thesis@doctortype: Added to support multiple dissertation types. <a href="#">Issue #4</a> . . . . .	18	v1.5	
\thesistu@thesis@doctortype@doctor: Added to support multiple dissertation types. <a href="#">Issue #4</a> . . . . .	18	General: Updated name of university to ‘TU Wien’. . . . .	1
\thesistu@thesis@doctortype@phd: Added to support multiple dissertation types. <a href="#">Issue #4</a> . . . . .	18	PolyLinguals: Updated name of university to ‘TU Wien’. . . . .	22
\thesistu@thesis@phd: Added to support multiple dissertation types. <a href="#">Issue #4</a> . . . . .	19	\thesistu@header@titlepage: added ability to set logo and header . . . . .	27
General: Added support for a dissertation at the Vienna Phd School of Informatics. <a href="#">Issue #4</a> . . . . .	1	General: added ability to change footer of titlepage . . . . .	27
Persons: Updated to support second advisor. <a href="#">Issue #4</a> . . . . .	22	added ability to change footer on titlepage . . . . .	8
PolyLinguals: Added to support multiple dissertation types. <a href="#">Issue #4</a> . . . . .	22	added setinstitut, setuniversity, setfaculty, added the possibility to set header and logo . . . . .	1
		added setuniversity, setfaculty, setinstitut . . . . .	25
		added the possibility to set header and logo . . . . .	7
		TextualData: added the ability to change footer on titlepage . . . . .	22
